

Abraham Yang 杨杨

Senior Frontend Engineer / Frontend Lead

Shanghai • abram.yang@outlook.com • +86 159-2109-8538 • <https://gh.abramyang.com/resume>

SUMMARY

Senior Frontend Engineer / Frontend Lead with 7+ years of experience building complex web and cross-platform products with React and TypeScript. Experienced in owning frontend architecture, technical decisions, engineering systems, real-time applications, SSR, Node.js services, and 0-to-1 product delivery. Hands-on with AI product development, including Dify-based RAG workflows, workflow orchestration, custom AI frontends, and AI-first engineering practices using Figma MCP and OpenAPI-driven tooling. Previously led cross-functional frontend teams and delivered products across APAC markets.

EXPERIENCE

- Senior Frontend Engineer** • Trajectory (formerly EY Fabernovel China) 2023.05 - Present
- Owned frontend architecture and delivery across complex React and TypeScript products, spanning real-time systems, cross-platform applications, SSR websites, headless CMS, and AI-enabled experiences.
 - Designed frontend architecture for Christie's products including real-time communication, multi-account permissions, cross-platform monorepo structure, reusable component systems, and type-safe API integration.
 - Built and orchestrated Dify-based RAG workflows for a Richemont knowledge application, owning workflow and node logic as well as the custom frontend experience.
 - Applied an AI-first development workflow on Kallista, combining Figma MCP and OpenAPI/Orval-generated contracts to provide structured context for LLM implementation while owning business logic, architecture boundaries, and review.
 - Delivered products for global luxury and premium brands including Christie's, Richemont, Hermès, Kallista, Messika, Bucherer, Bulgari, and Monotype.
- Frontend Lead** • Shanghai RJY Information Technology Co., Ltd 2021.09 - 2023.02
- Designed and implemented a customizable clothing platform with real-time 2D/3D rendering using React, Fabric.js, and Three.js.
 - Led frontend architecture and delivery for DIY clothing application and WeChat Miniprogram, managed agile teams and built CI/CD infrastructure.
 - Developed a Node.js headless rendering service to generate print-ready high-resolution output from user designs, enabling offline export without client-side rendering constraints.
- Senior Frontend Engineer** • Shanghai Fumasoft Co., Ltd 2020.12 - 2021.09
- Refactored a React Native app into a WebView-based hybrid architecture, enabling a shared codebase across iOS, Android, and H5.
 - Led a cross-functional team of 5 engineers (FE, iOS, Android) coordinating sprint planning and technical decisions.
- Frontend Engineer** • Publicis Sapient 2019.04 - 2020.11
- Developed responsive campaign websites and minisites for Huawei, Marriott, and automotive brands.
 - Collaborated across Singapore, Japan, and India teams in distributed delivery model.

SELECTED PROJECTS

- Christie's WeChat Miniprogram** Ongoing frontend architecture and development for Christie's China WeChat Miniprogram, covering complex auction, account, and cross-platform workflows. Tech: Taro, React, TypeScript, Redux, WebSocket, Orval, pnpm Workspaces.
- Established predictable global state management with Redux across complex auction and account workflows.
 - Designed a WebSocket manager handling dual concurrent connections (global + local), automatic reconnection, and session recovery for reliable online auction interactions.
 - Refactored the multi-account module to support authorized sub-account switching with per-account permission control and isolated state.
- Shantec Website (Independent Project)** Independently architected and delivered a website from 0 to 1, applying experience gained from previous headless CMS projects. Tech: Next.js, TypeScript, Strapi, Tailwind CSS 4, Monorepo.
- Owned the project end to end, including architecture, frontend implementation, Strapi CMS integration, and delivery.
 - Applied and extended Headless CMS experience gained from the Monotype project to independently deliver a Strapi-based solution.
 - Structured the Web and CMS codebase as a monorepo and built the frontend with Next.js and Tailwind CSS 4.

Richemont AI Knowledge Workflow AI-assisted research and knowledge retrieval workflow built on Richemont monthly reports using Dify knowledge base and workflow capabilities. Tech: Dify, RAG, LLM Workflow, Custom Frontend.

- Worked with monthly report content indexed in a Dify knowledge base so relevant knowledge chunks could be retrieved as context for user queries.
- Owned workflow orchestration and node logic across task execution, conditional decisions, and workflow progression.
- Built the custom frontend experience that exposed the multi-stage AI workflow as an interactive product.

Kallista Miniprogram — AI-first Development Production Miniprogram delivered with an AI-first engineering workflow designed to make implementation and ongoing maintenance highly LLM-friendly. Tech: React, TypeScript, Taro, Figma MCP, OpenAPI, Orval, LLM Coding.

- Decomposed Figma designs into explicit component boundaries and used Figma MCP to provide structured design context for implementation.
- Used Orval to generate API clients and TypeScript types from backend OpenAPI specifications, giving the LLM machine-readable API contracts instead of relying on guessed endpoints or data structures.
- Focused human effort on business rules, architecture and component boundaries, edge cases, and code review while delegating substantial CRUD implementation to LLM coding tools.

Monotype Asia Website Built and localized the Monotype Asia website for China Mainland, Taiwan, and Korea in collaboration with a backend engineer. Tech: Astro, TypeScript, Tailwind, Strapi, SSR, i18n, Node.js.

- Architected the Web-side Astro SSR solution for deployment across China Mainland, Taiwan, and Korea, with region-specific locale, routing, and configuration.
- Collaborated with a backend engineer responsible for the Strapi CMS layer, integrating CMS content into the Web experience rather than claiming sole ownership of the backend implementation.
- Worked with multi-environment delivery across regional sites and gained hands-on Headless CMS experience later applied independently in the Shantec project.

Tootools Miniprogram Full-featured WeChat Miniprogram for custom clothing design with real-time 2D editing and 3D preview, serving as the core product of the company. Tech: React, Fabric.js, Three.js, Uniapp, Node.js.

- Architected a dual-rendering design editor with layer management, pattern/font/drawing tools, and undo/redo history, built on a rendering abstraction layer that decouples UI logic from Fabric.js and Three.js internals.
- Implemented real-time 3D preview by projecting user designs onto glTF clothing models via Three.js Decal Geometry.
- Built server-side rendering workflow with Node.js to export high-resolution print-ready design assets.

SKILLS

Web & Frontend Architecture React • TypeScript • Next.js • Astro • Vue • SSR • Component Architecture • Cross-platform Architecture • Mini Program

Engineering & Backend Node.js • WebSocket • REST APIs • OpenAPI • Orval • pnpm Workspaces • Monorepo • CI/CD • Docker • Strapi

AI Engineering Dify • RAG Workflow • LLM Workflow Orchestration • AI-first Development • Figma MCP • Claude Code • GitHub Copilot • Context Engineering

Visualization & Complex Interaction Fabric.js • Three.js • WebGL • Canvas • Interactive Editing Systems

INTERESTS

Engineering: System Design • Frontend Architecture • Developer Productivity • Innovations • Experimentation

Hobbies: Traveling • Fitness • Music • Photography • Calligraphy

EDUCATION

Shanghai Dianji University • Bachelor Electronic Engineering

2015.09 - 2019.06
